

Interested in cross-national demographic research?

If so, the Generations and Gender Programme (GGP) offers invaluable DATA resources, at your disposal for FREE!

You are invited to participate in

GGP DATA WORKSHOP

Taylor, Mezzanine Level, Marriott Wardman Park Hotel

30 MAR 2011

2:00 – 4:00 PM

The GGP, initiated in 2000, is a system of nationally comparative panel surveys and contextual databases which aims at improving our knowledge about demographic processes in Europe and other developed countries. Currently, wave 1 individual-level datasets are available for 11 countries (Austria, Bulgaria, Estonia, France, Georgia, Germany, Hungary, Netherlands, Norway, Rumania, Russia). In addition, data on a Turkish-subsample of the German population is available. Later this year, wave 1 data releases for Australia, Belgium, Italy, and Lithuania are planned. In addition, the first wave 2 data sets (Bulgaria, Germany, Netherlands) are also planned to be released this year.

Next to individual-level data, a contextual database including macro-indicators on 60 developed countries can be consulted, and data can be downloaded.

In the GGP Data Workshop, information will be provided about the content of the Generations and Gender Survey and the Contextual Database. The programme of this 2-hours workshop is:

General Introduction

Andrej Kveder

Netherlands Interdisciplinary Demographic Institute, The Hague, Netherlands

The GGS: What is in the survey?

Aart C. Liefbroer

Netherlands Interdisciplinary Demographic Institute, The Hague, Netherlands

Data dissemination and access

Andrej Kveder

Netherlands Interdisciplinary Demographic Institute, The Hague, Netherlands

The Contextual Database

Sebastian Klüsener

Max Planck Institute for Demographic Research, Rostock, Germany

Questions and Answers

We are looking forward to meeting you in Washington D.C. !
