

Latest Updates from the GGP

Take a look at what the GGP has been up to over the past month

1. [GGP Essentials](#)
Take a look at this month's GGP Essential, which looks at the share of individuals living with their parents
2. [GGP joins forces with LISS in NWO-funded Deepfield Project](#)
Find out how the NWO-funded Deepfield project will expand the LISS panel and create new opportunities for GGP research.
3. [Updates from the GGP Central Hub](#)
Find the latest updates from fieldwork and data processing.
4. [Updates from the Consortium](#)
This month we have some updates from our [Lithuanian](#), [Swedish](#), [Polish](#) and [Austrian](#) teams.
5. [Upcoming Events](#)
Mark your calendars for upcoming GGP events.
6. [Latest Publications](#)
Read up on the latest publications utilizing GGP data, get informed and get inspired!

Who lives with their parents?

Using **GGP data** on around **50,000** respondents aged **18-34**, **Wiktoria Bąchorek**, and **Marta Bryzek** explored living arrangements across **16 countries and regions**.

Their analysis reveals substantial cross-country variation. The share of 18-34-year-olds living with their parents ranges from **11.1% in Finland** to **41.3% in Croatia**. Younger adults are more likely to live with their parents in all countries and regions included, although the difference between those aged 18-24 and 25-34 varies considerably.

The latest GGP Essential uses this topic to illustrate just one of the many research questions that can be explored with Generations and Gender Survey data.

With internationally comparable information on living arrangements, relationships, fertility, intergenerational ties, work, wellbeing and much more, the GGS enables researchers to examine how family lives and life-course transitions differ across countries and over time.

This is just one example of what the data can reveal. **What would you investigate with**

GGP joins forces with LISS in NWO-funded Deepfield Project

The [Dutch Research Council \(NWO\)](#) has awarded €3.5 million to the Deepfield project, a collaboration between [ODISSEI](#), [Centerdata](#) and the [Netherlands Interdisciplinary Demographic Institute \(NIDI\)](#) (via the Generations and Gender Programme (GGP)).

The funding will enable the **expansion of the LISS panel**, Centerdata's probability-based online research panel, from 5,000 to **10,000 households** over the next five years. This expansion will create greater capacity for scientific research while further strengthening and modernizing the Dutch research infrastructure. In addition, the expansion will also allow NIDI-GGP to field – for the first time – part of its Generations and Gender Survey (GGS) as part of the LISS panel (wave 3 planned for 2029). This unique collaboration will provide a wealth of information about the GGS respondents. It will also allow the NIDI-GGP to assess how such an innovation could be integrated into its own operation.

Updates from the GGP Central Hub

Fieldwork

Wave 1 (Baseline): **South Korea** have progressed with their data collection. As of September 15th, our fieldwork progress is at **56.9%**, with approximately **7,000** out of our target **12,000** responses completed. **Lithuania** has also started their data collection.

Wave 2 (Follow-up): Data collection is progressing in **Croatia**, surpassing **5,000** cases (before data processing), after starting their fieldwork in **May** earlier this year. **Argentina (Buenos Aires)** has now started fielding their survey.

Preparations are also underway in three additional countries that are expected to launch in the coming months. While **Hong Kong** is scheduled to go into the field later in **October**, while **France** and **Austria** are expected to follow next year.

Data Processing

GGG-II Wave 1 Poland dataset has been released!

The dataset includes around **9,500 respondents (43% males, 57% females)**. Around half of the interviews were conducted via **self-completion**, while the other half were **interviewer-administered**.

The data are now available for download from the [GGP Data Portal](#).

Updates from the Consortium

[Generations and Gender Programme Lithuania](#)

GGG-II wave 1 fieldwork has officially launched in **Lithuania**.

The data collection started in early **September 2026** and will run until the end of **November 2026**. Around **10,000** randomly selected residents aged **18–59** will be invited to participate, either by completing the questionnaire online or through a face-to-face interview.

The Lithuanian GGS is implemented by a consortium of **Vytautas Magnus University**, **Lithuanian Centre for Social Sciences**, **State Data Agency** and **STRATA**. Respondents will be approached again in 2029 for wave 2.

What can policy do about falling fertility in Sweden?

Sweden's sustained fertility decline is raising important questions about how family policy should respond to a changing demographic landscape. In a new Policy Insights article for [Population Europe](#), **Gunnar Andersson** examines what is driving the decline and identifies five priorities for policymakers.

The article also highlights the value of the Swedish Generations and Gender Survey (GGS) in understanding how intentions around parenthood are changing, particularly among childless couples.

Generations and Gender Programme Poland

GGP-PL Data Launch: First Results Presented in Warsaw

On 23 September 2026, **SGH Warsaw School of Economics** hosted the GGP-PL Data Launch.

The hybrid event brought together representatives of government institutions, academia and NGOs. The programme included an overview of the Polish GGP study, an invited talk by **Ewa Cukrowska-Torzewska**, as well as short presentations by GGP-PL team members on parenthood, partnerships and fathers' involvement in childcare.

The Data Launch also marked the publication of the GGP-PL report, **Rodzina, relacje i warunki życia w Polsce (Family, Relationships and Living Conditions in Poland)**, presenting the first findings from Wave 1 of the Polish GGS-II. The event concluded with a poster session showcasing selected findings from the report.

The report is available in Polish on [Zenodo](#). An English version will follow.

SGH Summer School: Statistical Workshops on the Life Course

The day after the GGP-PL Data Launch, **SGH** hosted a **Summer School** devoted to the statistical analysis of family life courses.

The hands-on programme was based on newly collected GGS-PL data and focused on two key approaches in life-course research: **sequence analysis and event history analysis**. Participants used these methods to study major life-course transitions, including leaving the parental home, partnership formation and entry into parenthood.

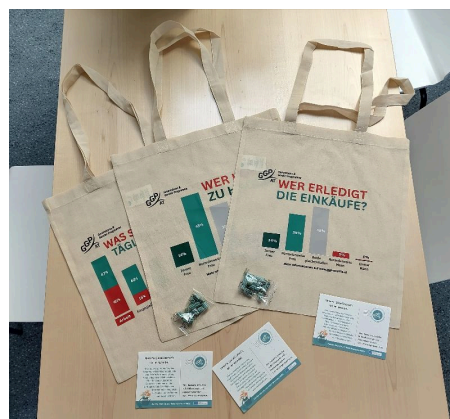

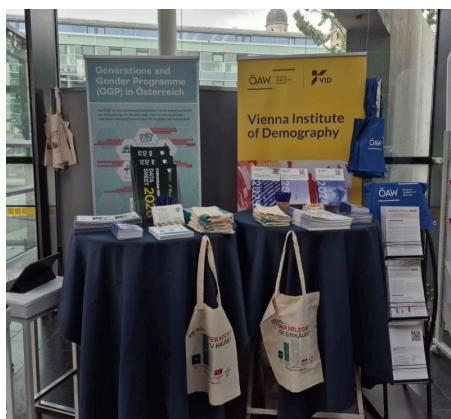

The programme also introduced [SHARE](#) data, highlighting how the two research infrastructures can complement each other in analyses of life-course processes.

Generations and Gender Programme Austria

GGP at the Annual Conference of the German Economic Association 2026

The GGP was featured at the **VfS Annual Conference 2026**, held in **Innsbruck (Austria)** from **13-16th of September**. The VfS (**Verein für Socialpolitik; German Economic Association**) is one of the oldest and largest professional associations in the field of economics in the world, founded in 1873. The association aims to promote science and research, addressing economic and socio-political problems. The association is particularly interested in fostering international relations and cooperation between academics from **Germany, Austria, and Switzerland**.

Visitors to the booth, organised by the **Vienna Institute of Demography (VID)** of the Austrian Academy of Sciences, enjoyed engaging discussions, received informative materials, and were delighted with GGP bags, promoting insights on "Who is doing the

shopping?"; "What stresses us in daily life?", "Who is cooking at home?" and "How couples meet?".
