Children's legal obligation to support parents	32

Introduction

This version follow-up report provides information on what has been changed in the Multilinks Database on Intergenerational Policy Indicators over time. The report enables users to trace back through all of the changes made to the database since it was first published in September 2011 (version 2.0).

The Multilinks Database on Intergenerational Policy Indicators is continuously monitored and updated. Errors in the data set, information from more reliable sources, new indicators and updates are integrated into the database from time to time. For each renewed upload of data onto the Internet, a new version is set up. The version designation consists of two numbers. The first number indicates how many reference years are included (two at the moment). The second number shows how many relaunches of the database have been made to up date the data without adding a new reference year (at the moment one).

A relaunch of the database means that all files and documents (database, data sets for statistical analysis, methodological report, code-book) have been revised and updated. These files and documents always refer to the most recent version of the database; it is not possible to follow up changes from these sources. In the version follow-up report, however, all entries from former versions of the database are shown. Most of the changes made are documented. This report is a useful tool for controlling whether the data from a previous database version that have been used in publications or statistical analysis are still up to date. For each indicator there is a report table in which changes are documented.

The version follow-up report documents all changes of indicator values, indicator definitions, and data sources. Changes to general comments and country-specific comments are reported only if the content has changed substantially. Furthermore, all extensions of an indicator, such as a new reference year or further country information, are documented. Corrections of spelling, layout and the like are not listed.

Version characteristics

The following paragraphs describe the main features of the published versions and document substantive changes.

Version 2.0

This version is the first publicly available version of the Multilinks Database on Intergenerational Policy Indicators.¹ Published in September 2011, version 2.0 for the first time includes information for two reference years: 2004 and 2009. There are 76 indicators included in the database for 30 European countries.

Version 2.1

In this subversion some reorganisation at the level of subthemes has been made. There are four new indicators on the level of child allowances. To reduce the number of indicators per subtheme the former subtheme on child allowances are subdivided into two subthemes, one on eligibility conditions and one on the level of child allowances. Another new subtheme has been introduced. The two indicators on credited non-contribution periods for caring in public pension schemes are headed under a new subtheme: recognition of care work.

Seven indicators have been newly introduced:

- School holidays per school year
- Effective retirement age of men
- Effective retirement age of women
- Child allowance per child in euro – 1 child
- Child allowance per child in euro – 3 children
- Child allowance for 1 child as a share of net average income
- Child allowance for 3 children as a share of net average income

¹ Previous versions included data for the reference year 2004 only; these versions were used by the Multilinks project members during the project phase. There was no public access to these data.

Version list

Version number	Date published	Changes
2.0	26.09.2011	<i>First open publication of the Multilinks Database on Intergenerational Policy Indicators, including the reference years 2004 and 2009.</i>
2.1	13.12.2011	<i>Version 2.1 integrates seven new indicators in the database. There were only minor changes with the exception of the two indicators for child allowance. Two subthemes have been subdivided and reframed.</i>

Documentation by indicator

Subtheme: Maternity leave

Eligibility conditions for maternity leave

ID: 1010110	
<i>Version</i>	Reporting
2.0	First published
2.1	No changes made.

Duration of maternity leave

<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Child birth grant available?

ID: 1010340	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Childbirth grant: amount

ID: 1010350	
<i>Version</i>	Reporting
2.0	First published
2.1	New indicator label, before it was "Amount granted".

Subtheme: Leave dedicated to fathers**Eligibility conditions for paternity leave**

ID: 1010410	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Duration of paternity leave

ID: 1010420	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Paternity leave: Level of compensation

ID: 1010430	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Leave-quota reserved for the father

ID: 1010440	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	New comment on Austria 2004 and 2009: "Up to 6 months prolonged payment of the child-rearing allowance if both parents share the parental leave."

Subtheme: Comparative leave indicators**Effective parental leave**

ID: 1010510	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Length of well paid leave

ID: 1010520	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Subtheme: Care for children younger than 3 years old**Individual entitlement to childcare services for children under 3 years old**

ID: 1020110	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Coverage rate for children under 3 years old

ID: 1020120	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	Figure for Italy has been changed from 11.2 in 2005 to 11.4 in 2004 because the reference in version 2.0 was not correct. The new reference: Istituto degli Innocenti (2010) is documented in the methodological report (version 2.1 upwards).

Childcare usage for children under 3 years old

ID: 1020130	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Full-time childcare usage for children under 3 years old

ID: 1020140	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Subtheme: Care for children aged 3 to 5 years**Individual entitlement to childcare services for children aged 3 to 5 years**

ID: 1020210	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Coverage rate for children aged 3 to 5 years

2.1	No changes made.

Variation of child allowance by age

ID: 2010130	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Variation of child allowance by number of children

ID: 2010140	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Variation of child allowance by other characteristics

ID: 2010150	
<i>Version</i>	Reporting
2.0	<i>First published</i>
2.1	No changes made.

Subtheme: Level of child allowance

(New subtheme since version 2.1)

Child allowance per child in euro – 1 child

ID: 2011510	
Version	Reporting
2.0	Not part of version 2.0.
2.1	First published

Child allowance for 1 child as a share of average income

ID: 2011520	
Version	Reporting
2.0	Not part of version 2.0.
2.1	First published

Child allowance per child in euro – 2 children

ID: 2011530	
Version	Reporting
2.0	First published
2.1	<p>Change in Belgium 2009. Supplement for a 6-12 year old child of 14.53 euro is added. Amount per child therefore increase from 119 to 126 euro.</p> <p>Change for Cyprus in 2004. For families with lower incomes a supplement at different levels is paid. For the net average income a medium supplement has to be added. This has not been considered in version 2.0. From version 2.1 onwards a supplement is added to the base child allowance. The value for 2004 changed from 30 to 40 euro per child.</p> <p>Change in Estonia 2009. The child allowance for the 1st and 2nd child is two times the child allowance rate of 9.59 euro. In version 2.0 only the child allowance rate is reported, thus the value change from 10 to 19 euro.</p> <p>Change for Italy in 2004 and 2009. Child allowance depends on household income. The reference income to calculate the allowance is the gross income minus social security contributions. In the former version we set this reference income equal to the net income which is wrong. From version 2.1 onwards the average gross net income minus social security contributions is taken from Eurostat. In this higher income strata child allowance is much lower. The value for 2004 changed from 95 to 56 and the value for 2009 has altered from 93 to 61 euro per child.</p> <p>Change in Luxembourg 2009. A supplement of 16.17 for a child in the age of 6-12 years has not been considered in version 2.0. The value in version 2.1 has been change from 220 to 228 euro per child.</p> <p>Change for Malta in 2004 and 2009. Child allowance depends on household income. The reference income to calculate the allowance is the gross income minus social security contributions. In the former version we set this reference income equal to the net income which is wrong. From version 2.1 onwards the average gross net income minus social security contributions is taken from Eurostat. In this higher income strata child allowance is lower. The value for 2004 changed from 61 to 54 and the value for 2009 has altered from 48 to 41 euro per child.</p> <p>Change in Portugal 2009. For a child aged between 12 and 36 months the basic</p>

	<p>child allowance is doubled if there is a second child in the household. This is not considered in version 2.0. Therefore the child allowance changed in version 2.1 from 23 to 34 euro per child.</p> <p>Change in Romania 2009. Flat rate state child allowance is 48 euro for child younger than 2 and 10 euro for child aged 2 or older. The model case includes a two year old child. In version 2.0 for this child a benefit of 48 euro has been considered. However 10 euro is correct. The value changed from 36 to 24 euro in version 2.1.</p> <p>The indicator is classified in a newly introduced subtheme (in the previous version under the subtheme “Child allowances”). Therefore the indicator ID has been changed from 2010155 to 2011530. This affects also the variable name in the statistical dataset.</p> <p>In addition, the name of the indicator has been changed because child allowance for two other model families are now included which differ with regard to number of children. Therefore, the number of children is now part of the indicator title.</p>

Child allowance for 2 children as a share of average income

ID: 2011540	
<i>Version</i>	Reporting
2.0	First published
2.1	<p>Change in Belgium 2009. Supplement for a 6-12 year old child of 14.53 euro is added. Share of average income therefore increase from 12.0 to 12.7 percent.</p> <p>Change for Cyprus in 2004. For families with lower incomes a supplement at different levels is paid. For the net average income a medium supplement has to be added. This has not been considered in version 2.0. From version 2.1 a supplement is added to the base child allowance. The value for 2004 changed from 4.6 to 6.2 percent of net average income.</p> <p>Change in Estonia 2009. The child allowance for the 1st and 2nd child is two times the child allowance rate of 9.59 euro. In version 2.0 only the child allowance rate is considered, thus the share of average income change from 3.0 to 6.0 percent.</p> <p>Change for Italy in 2004 and 2009. Child allowance depends on household income. The reference income to calculate the allowance is the gross income minus social security contributions. In the former version we set this reference income equal to the net income which is wrong. From version 2.1 onwards the average gross net income minus social security contributions is taken from Eurostat. In this higher income strata child allowance is much lower. The value for 2004 changed from 13.7 to 8.0 and the value for 2009 has altered from 11.6 to 7.5 percent of average net income.</p> <p>Change in Luxembourg 2009. A supplement of 16.17 for a child in the age of 6-12 years has not been considered in version 2.0. The value in version 2.1 has been change from 14.9 to 15.5 percent of average net income.</p> <p>Change for Malta in 2004 and 2009. Child allowance depends on household income. The reference income to calculate the allowance is the gross income minus social security contributions. In the former version we set this reference income equal to the net income which is wrong. From version 2.1 onwards the average gross net income minus social security contributions is taken from Eurostat. In this higher income strata child allowance is lower. The value for 2004 changed from 12.4 to 10.9 and the value for 2009 has altered from 8.1 to</p>

	<p>6.8 percent of average net income.</p> <p>Change in Portugal 2009. For a child aged between 12 and 36 months the basic child allowance is doubled if there is a second child in the household. This is not considered in version 2.0. Therefore the child allowance as a share of average net income changed from 4.1 to 6.1 percent.</p> <p>Change in Romania 2009. Flat rate state child allowance is 48 euro for child younger than 2 and 10 euro for child aged 2 or older. The model case includes a two year old child. In version 2.0 for this child a benefit of 48 euro has been considered. However 10 euro is correct. The value changed from 24.1 to 16.1 percent of net average income.</p> <p>The indicator is classified in a newly introduced subtheme (in the previous version under the subtheme “Child allowances”). Therefore the indicator ID has been changed from 2010160 to 2011540. This affects also the variable name in the statistical dataset.</p> <p>In addition, the name of the indicator has been changed because child allowance for two other model families are now included which differ with regard to number of children. Therefore, the number of children is now part of the indicator title.</p>
