The Population Europe’s Discussion Paper No. 11 presents a selection of studies on migrants' family dynamics in Europe based on the data of the GGS, which represents a valuable source to study migrants' family life trajectories in a comparative perspective. Particularly, the contributions in this paper focus on the wellbeing of elderly migrants, the family formation practices, and the intra- and inter-national support patterns among immigrants and ethnic minorities in Europe.
A beta version of the new *Contextual Database* (CDB) of the Generations & Gender Programme (GGP) is now online [here](#). The CDB offers open access to comparable, aggregated contextual data for a large number of European, North American and Asian countries, which can be also linked to the individual level data of the Generations & Gender Surveys (GGS). In 2018 the French Institute for Demographic Studies (INED) took the lead in maintaining the GGP Contextual Database. Since then, a new online platform has been created. A set of core indicators has been identified and will be regularly updated. The aim is to provide a unique tool for researchers interested in demographic, economic, gender-related, and policy issues. Tabulations and graphs of key contextual indicators can be produced by using diverse data including (i.e.) the Global Gender Gap Index, the Human Development Index, the Net-Enrollment Ratio (pre-primary), and many others.
The GGP is pleased to announce that the Swedish GGS Wave 2 Register Data update are now accessible and ready to be used. This data release which provides updates for respondents of wave 1 from the Swedish register represents a very innovative approach in the social survey international landscape. It contains detailed information on new children born and changes in marital status since the wave 1 data was collected. This allows for zero attrition and integration of additional information from the population register dating back to 1990 on topics such as income, eligibility for parental leave, and other child-related information.
Polish Pre-harmonized Data,
Wave 1 and Wave 2

The Polish GGS pre-harmonized data files of wave 1 and wave 2 are now available and ready for use upon request. Users of the Poland GGS data can find extra information not yet included in the GGP previous survey such as:

- employment histories (wave 1)
- migration experience (wave 2)
- perceived costs and benefits of children (wave 2)
- waiting time to pregnancy (wave 1, and wave 2)
- additional scale on subjective well-being (wave 1, and wave 2)
- importance of religion (wave 1, and wave 2)

Users interested in using these unique data for their research can apply here: https://www.ggp-i.org/form/
Data Visualization Workshop
with Ilya Kashnitsky in Partnership with the IUSSP
Paris, 22-23 October 2019

A two-day workshop on visualizing life course data will take place ahead of the GGP User Conference in Paris. Based on GGP data, the course will use R and the power of Tidyverse to produce stunning and impactful data visualizations of life course data. **Application deadline: Friday 31 May 2019!!**
