Documentation of the Standardization of the Harmonized Histories
Data File for birth, partnership histories, leaving home questions and
background variables for Georgia

HARMONIZED HISTORIES Georgia (10000 respondents)

Karolin Kubisch
Max Planck Institute for Demographic Research Rostock

15.2. 2013
Updated 3.6.2014
Updated 27.10.2015

The following documentation gives a description of all input variables
and the consequent preparation of the output variables according to the
manual for the preparation of comparative fertility and union
histories.
All problem cases as well as the treatment of these cases are described
in detail.

June 2014: Corrections in the variables to leaving home histories of
children (KID_L, KID_LY, KID_LM)
2014: changes in KID_Dx

October 2015: Please note that the partnership histories were modified
in October 2015. More precisely, we changed the sorting of the variable
UNION_§ (Union order). Prior to that date, we had sorted the unions by
start year of the union. This involved that unions which start dates
were missing were always listed as last unions. In the modified
version, we sorted the partnerships no longer by relying on the start
year of the union, but by relying on the order of the union as they
appear in the original dataset. For Georgia it affects 0 cases.

In connection with this modification, some smaller consistency changes
were made to the data. In particular, we recoded the following
constellations:
• Events (Union, Marriage, Separation, Divorce) before age 12 of
  respondent
• Event before age 12 of partner
• Negative difference between partnership date and marriage date
• Negative difference between separation date and union or marriage
date and negative difference between divorce date and union or
marriage date
• Sucesive partnerships mar-mar[\_n-1]<=0 or par-par[\_n-1]<=0
• Differences between separation date and next partnership date
  sep>par[\_n+1]

All modifications made October 2015 are described in the updated
documentation.
Missing values are coded:
.a unknown
.b does not apply
.c unavailable in survey

Source: UN Data: GGS_Wave1_Georgia_V.4.1.dta
Interview dates Georgia GGS: March to July 2006

1. Part Basic Information

RESPID: ID number to be assigned at merging LEAVE BLANK

ARID: ID number from raw data (original ID number) used: arid
10000 respondents

COUNTRY: Country and survey used: acountry
country: code 13: Georgia
COUNTRY: code: 2681: Georgia GGS
no missing cases

MONTH_S: Month of survey
Not included

IMONTH_S: Month of survey, including imputed dates
Interview between March and July 2006

YEAR_S: Year of survey used: ayear
2006

SEX: Sex of the respondent used: ahg4_1
No missing cases
Sex structure of the Georgian respondents:
Male: 4405 and Female: 5595

BORN_Y: Year of birth of respondent used: ahg6y_1
1926-1988

BORN_M: Month of birth of respondent used: ahg6m_1

IBORN_M: Month of birth of respondent including imputed months
Harmonized: random variable between 1-12

2. Part LEAVING HOME

LEAVE_1: Indicator of whether “left home” used: GRID=1 go to a5117a
=0 go to a5116m/y
a5117a=1 go to a5117bm/y
**Definition:**
*Respondent did not leave home (code 0) if: a parent lives in the household (GRID=1) and respondent never lived separately from parents (a5117a=2)*
*Respondent left home (code 1) if: there is no parent in household (GRID=0) or there is a parent in household (GRID=1) and respondent ever left home (a5117a=1)*

LEAVE_1 0: 1750 / 1: 8249

**LEAVE_Y1:** Year of first time leaving home used: a5116y and a5117by

**Filter:** LEAVE_Y1/LEAVE_M1 to .b if LEAVE_1==0 (547)
Missing cases: 35

**LEAVE_M1:** Month of first time leaving home used: a5116m and a5117bm
Missing cases: .b 1750 .a 82

**ILEAVE_M1:** Month of first time leaving home and imputed months: used: LEAVE_M1

Harmonized: random variables according to manual

---

**3. Part UNIONS AND DISSOLUTION ($=order of union)**

**UNINUM:** Total number of unions used: UNION_1 to _3

Syntax:
```
forvalues x=1/3 {
    replace UNINUM=UNINUM+1 if UNION_`x'>&gt;0
}
```

UNINUM:
0: 2192
1: 7604
2: 196
3: 8

**UNION_$:** UNION order

For the chapters union /marriage and divorce/ and a part of partners characteristics an reshaping program was used, which includes partnership histories and questions to the current partner

**Definition (Union_1 to UNION_x):**
➤an union exists if there is an answer in at least one of the questions about the current partner ( a301m – a308) or in partnership histories (a334m – a349y)

UNION_1: 7808
UNION_2: 204
UNION_3: 8
No missing cases

**UNION_Y$: Year of start union**
used: a301y and a334y

*Filter:* UNION_Yx=.b if UNION_x==0

UNION_Y2 missing values: 1

**UNION_M$: Month of start UNION**
used: a301m and a334m

*Filter:* UNION_Mx=.b if UNION_x==0

UNION_M1 missing values: 26
UNION_M2 missing values: 2

**IUNION_M$: Month of start UNION**
used: UNION_M$ and imputed months

according to manual page 4 (random)

*Filter:* IUNION_Mx=.b if UNION_x==0

**SEP_: Dissolution of UNION**
used: a343 (only histories)

*Filter:* SEP_x=.b if UNION_x==0
in case of current partner: no separation

<table>
<thead>
<tr>
<th>Order of Union</th>
<th>Number of unions</th>
<th>number of separations</th>
<th>death of partner</th>
</tr>

</tr>
<tr>
<td>3</td>
<td>8</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**SEP_Y$: Year of end of UNION**
used: a344y (only histories)

*Filter:* SEP_Yx=.b if UNION_x==0
SEP_Yx=.b if SEP_x==0

SEP_Y1 missing values: 26
SEP_Y2 missing values: 1

**SEP_M$: Month of end of UNION**
used: a344m (histories only)

*Filter:* SEP_Mx=.b if UNION_x==0
SEP_Mx=.b if SEP_x==0

SEP_M1 missing values: 51
SEP_M2 missing values: 2

**ISEP_M$: Month of end of UNION**
and imputed months

according to manual page 4 (random)
4. Part MARRIAGE AND DIVORCE ($=order of union)

**MARR_\$:** Indicator of whether marriage took place and type of marriage  
used: a302a and a335a

Filter: MARR_x=.b if UNION_x==0

MARR_2 missing values: 1

<table>
<thead>
<tr>

<td>7808</td>
<td>6748</td>
<td>205</td>
</tr>
</tbody>
</table>
DIV_Y$:  Year of divorce  
used: a349y

Filter:  
DIV_Yx=.b if UNION_x==0  
DIV_Yx=.b if MARR_x==0  
DIV_Yx=.b if DIV_X==0 or .d

DIV_Y2 missing values: 1

DIV_M$:  Month of divorce  
used: a349m

Filter:  
DIV_Mx=.b if UNION_x==0  
DIV_Mx=.b if MARR_x==0  
DIV_Mx=.b if DIV_x==0 or .d

DIV_M1 missing values: 2  
DIV_M2 missing values: 1

IDIV_M$:  Month of divorce  
used: DIV_M$  
and imputed months  
according to manual page 4 (random)

Filter:  
IDIV_Mx=.b if UNION_x==0  
IDIV_Mx=.b if MARR_x==0  
IDIV_Mx=.b if DIV_x==0 or .d

5. Part PARTNER`S CHARACTERISTICS ($=order of union)

SEXP_$:  Partner`s sex  
used: ahg4_1, ahg4_2

Filter:  
SEXP_x=.b if UNION_x==0

<table>
<thead>
<tr>
<th>Partner</th>
<th>Number of unions</th>
<th>Number male</th>
<th>Number female</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>7808</td>
<td>4535</td>

</tbody>
</table>

YEARBIRP$:  Year of birth of partner  
Used: ahg6y_2 and a336y

Filter:  
YEARBIRP_x=.b if UNION_x==0

YEARBIRP_1 missing cases: 19  
YEARBIRP_2 missing cases: 3

MONBIRP$:  Month of birth of partner  
used: ahg6m_2 and a336m

Filter:  
MONBIRP_x=.b if UNION_x==0
MONBIRP_1 missing cases: 61
MONBIRP_2 missing cases: 4

**IMONBIRP_$**: Month of birth of partner used: MONBIRP_$ and imputed months according to manual page 4 (random)

**Filter**: IMONBIRP_x=.b if UNION_x==0

**NUMCHP_$**: Number of children of partner at start of union$

for current partner:
a) children of partner (household members): relation of household member to respondent: code 4: stepchild: my current partners child not adopted by me→ ahg3_2 to ahg3_8
b) non-resident stepchildren: a226==1 and a231
c) for partnership histories: a338_1 to a338_6
also: year of start of union (a301y) and year of birth of stepchild (ahg6y_x and a230_x)

**Problem**: The question: When you started living together, how many children did your partner have? (a338) - exists only for partnership histories
-for current partnership it had to be created with help of the number of stepchildren, year of start of union and year of birth of stepchild

**Definition**: in the number of children of current partner are included:  
* all stepchildren of respondent living at the moment of interview in household grid and were born before the start of the union  
* all nonresident stepchildren at the time of interview - partners children born before partnership (year start union - birth year>0)  
* the number of partner’s children at start of a union in partnership history (a338_1 to a338_6)

**Filter**: NUMCHP_$.=b if UNION_X==0

NUMCHP_2: missing values: 1

**NUMCLIV_$**: Number of children of partner lived with respondent

<table>

</tbody>
</table>
Summary: The variable NUMCHP had to be created for the current partnership. The variable NUMCLIV is not included in dataset.

6. Part Birth histories (biological kids)

For the chapter “Birth histories” a reshaping program was used, which includes biological children in household and questions to the nonresident biological children.

To create the number of biological children (KID_1 to KID_x) the following definition was applied:

- A biological child exists in household if there is code 2 or 3 (biological child by current or previous partner) in the relationship to respondent (ahg3_).
- A nonresident biological child exists if a213_==1

KID_$: Indicator of child order

used: ahg1_ and generated variable obnr (at least 1 answer in questions a212 to a224)

no missing cases

<table>

- KID_DMx=.b if KID_Dx==0

KID_DM1 missing values: 4
KID_DM2 missing values: 1
KID_DM3 missing values: 2

**IKID_DM$:** Month of death of child and imputed months

**KID_L$:**  Child left home used: a220y/a220m

Child’s parental home leave variable (KID_L) was not constructed perfectly as it was created in wide format instead of long. Namely the error occurred assuming that child’s order would perfectly match of those living outside the household. More specifically, if child from outside household changes its order (because of preceding foster/adopted or a step child) and in household grid is reported biological child of the same order, then this particular child will be coded as “0” (did not leave home). Furthermore some children living in the household were coded as left home.

Initially both KID_LY (year of child’s home leave) and KID_M (month of child’s home leave) variables were constructed correctly, however due to reason that KID_L variable serves as filter for both variables then these variables eventually were changed to either “.b” (does not apply) or “.a” (unknown).

Since june 2014 KID_L is constructed in a long format. In addition children which died were excluded from KID_L=1 and are now coded with special missing code .d and KID_LY and KID LM for dead children is coded as .b.

**Definition:** Child left home if a220m_x or a220y_x!=.

**Filter:** KID_Lx=.b if KID_x==0

**EDU_Y:** Year highest level of education achieved used: a150y

Missing values: .a 3211

replace EDU_Y=.a if (EDU_Y<BORN_Y)

**EDU_M:** Month highest level of education achieved

Missing values: .a 3269

**IEDU_Y:** Year highest level education achieved and imputed year

IMPUTATION of missing years by level of Education

find the modal age of education with help of birth year and graduation year. Year of graduation for missing cases then is calculated by adding modal age of graduation to the birth date.

Missing values: .a 154

**IEDU_M:** Month highest education achieved and imputed month

Missing values: .a 154

**Summary:**
The EDU_COU data exist in a country specific ISCED97 form.

---

8. Part Background variables (ethnicity, nationality etc.)

**NATIVE:** Born in country used: a105

Born in country: 9807
Born elsewhere: 193

**ETHNOS:** Ethnicity/nationality used: a110
NOT INCLUDED IN SURVEY

**BIRTH_COU:** Country of birth  
used: a106b

Country specific variable (268+1+code)  
**Filter:** BIRTH_COU=.b if a105==1

**MIG_Y:** Year of migration  
used: a107y

**Filter:** MIG_Y=.b if a105==1

**MIG_M:** Month of migration  
used: 107m

**Filter:** MIG_M=.b if a105==1

**IMIG_M:** Month of migration and imputed months  
used: MIG_M  
according to manual page 4 (random)

---

**9. Part Background variables (parental background)**

**SIS_NO:** Number of sisters  
used: a5106a_s

0 – 12 sisters

**BRO_NO:** Number of brothers  
used: a5106a_b

0 – 9 brothers

missing cases: 108

**SIBS:** Total number of sibs  
used: a5106a_s and a5106a_b

0-14 sibs

**DECISION:** If number of sisters is known and number of brothers is unknown or number of brothers is known and number of sisters is unknown: the number of known brothers or sisters is used if number of brothers and number of sisters is unknown the value remains (missing .a)

**SIS_DIED:** Number of sisters that died  
used: a5106a_s and a5106b_s  
(number of sisters respondent have ever had – number of alive sisters)

**Filter:** SIS_DIED=.b if a5106a_s==0

Missing cases: 57
**BRO_DIED**: Number of brothers that died  
used: a5106a_b and a5106b_b

**Filter**: BRO_DIED=.b if a5106a_b==0  
Missing cases: 150

**ISCED_MO**: Mother's highest level of education  
used: a5115
